COURSE DESCRIPTION:

This 3-day live workshop, facilitated by top industry professionals, helps you learn what's needed for your organization to get the job done safely, on time, and on budget. The course is constructed in modules presented in segments to meet specific needs of the audience. Each student will leave the class with a manual for future reference.

Take your skills to a whole new level with this opportunity to learn about the newest techniques, tips, and technology in the construction inspection industry. Construction Inspection is packed with the latest information in the construction inspection industry including practical techniques and real-world examples.

COURSE OVERVIEW:

Construction Inspection

- Negotiation and Management of complex projects
- Proper documentation
- Enhanced interpretation of drawings and specifications
- Using the right software to organize track quantities & costs
- Stormwater regulations
- Meeting clean water requirements during and after construction
- ADA compliance

Contract Administration

- Importance of pre-construction preparation and meetings
- Risk management
- Possible legal issues during construction
- Identifying different types of contracts
- Documentation and risk mitigation
- Taking charge of the final close-out process

Current Technology

- Soils testing and stabilization
- Advancements in piping, asphalt, and concrete
- Using technology in the field
- Introduction to Structures
- Excavation, trench and confined space safety
